WHY SUNSCREENS ARE SO IMPORTANT

When it comes to skin care and sun protection, broad spectrum sunscreen is a non-negotiable. Constant exposure to UVA and UVB rays can negatively impact the condition of skin, however, avoiding these harmful UV rays completely is not always the most manageable undertaking.

Our two sun protection products, the Broad Spectrum SPF 30+ Sunscreen and HydraTint Pro Mineral Broad Spectrum Sunscreen SPF 36, are formulated for everyday use and for every skin type. Whether you have sensitive skin, aging skin, or acne prone skin, our facial sunscreen products contain potent, yet soothing ingredients to seal in moisture without clogging pores.

Our team at ALASTIN developed the Broad Spectrum SPF 30+ Sunscreen using Octinoxate 7.5%, Zinc Oxide 10%, Tetrahexyldecyl Ascorbate, Green Tea Extract, Cucumber and Aloe Leaf Extract. This concentrated formula combines key ingredients and botanicals to protect skin from harmful UV rays, while also allowing the antioxidants of various plant extracts to deliver a calming effect on skin.

If you wear makeup on a regular basis and prefer that additional layer of coverage, our HydraTint Pro Mineral Broad Spectrum Sunscreen SPF 36 can correct skin tone unevenness, while protecting against unwanted sun exposure. The universal tint of this mineral sunscreen for face provides a lightweight coverage that is both oil-free, and fragrance-free, and won't leave behind a white residue. The key ingredients of this face sunscreen include Titanium Dioxide 8.9%, Zinc Oxide 3.4%, Phytoene and Phytofluene, Thermus Thermophilus Ferment, and

Asteriscus Graveolens Extract. The combination of these potent ingredients contain antioxidants to promote protection from sun exposure and environmental pollution, while counteracting IR-generated free radicals.

Use HydraTint Pro Mineral Broad Spectrum SPF 36 daily to protect skin from harmful UVA/UVB rays, shield against environmental pollution and provide a tint with a soft glow for perfect-looking skin.

Our tinted sunscreen was developed for daily use and also can be used immediately following skin treatments. This tinted mineral sunscreen is water-resistant for 40 minutes and reef-friendly to keep the health of our planet in mind.

- All mineral, lightweight formulation.
- Broad Spectrum UVA/UVB sun protection SPF 36.
